EDUCATION

Portland State University

Portland, OR

Bachelor of Science in Computer Science (University Honors College)

Sept. 2021 – Dec. 2025

- **Thesis:** Experience from a Distance - Improving Transparency for the Multnomah Athletic Club
- Collaborated with a six-person team to deliver a Senior Capstone project addressing remote marketing challenges
- Developed a web application featuring 360-degree photography and a dynamic interactive mapping system

EXPERIENCE

Intel

Hillsboro, OR

Inventory Technician Intern

May 2023 – Present

- Created custom scripts to streamline work processes and conducted audits of inventory rooms for Ethernet board parts
- Responsible for worldwide shipping and transporting electronic components to manufacturing warehouses
- Received a letter of recognition from management for quality control and reporting excellence

Snorkel AI

Remote

Task Based AI Expert Contributor: DevOps

April 2026 – Present

- Refined LLM code-generation and technical outputs to ensure high accuracy and adherence to software engineering best practices
- Designed complex, edge-case prompts to stress-test AI reasoning in backend and full-stack development scenarios
- Corrected and rewrote AI-generated responses, eliminating factual errors and improving the clarity of technical explanations
- Conducted rigorous quality evaluations on training datasets to improve the reliability of enterprise-grade AI applications

YesCare

Remote

Data Entry Clerk

May 2026 – Present

- Verified information for completeness and correctness, correcting any discrepancies
- Identified, investigated, and escalated data inconsistencies or issues when necessary
- Maintained confidentiality and security of sensitive information
- Collaborated with team members to improve data management processes

PROJECTS

Lunar Gateway Autonomy | *Go, Python, FastAPI, React, Kubernetes, MQTT*

- Developed a high-reliability edge controller and autonomous AI decision engine to manage simulated space station operations
- Built a Go-based telemetry ingestion module utilizing MQTT for power management and thermal control load shedding
- Designed a React and TypeScript visualizer to track AI choices, monitor the power grid, and parse structured cargo logistics

UAV Flight Optimizer | *Go, Python, React, TypeScript, MapboxGL*

- Engineered a physics and pathfinding engine utilizing a custom 3D A* algorithm weighted by drone energy consumption
- Created a Go environment service to fetch real-time 3D wind vectors and parse GeoTIFF topographic elevation data
- Developed an interactive mission planner frontend to visualize 3D flight paths, altitude profiles, and estimated battery drain

TECHNICAL SKILLS

Languages: C, C++, Python, Java, TypeScript, JavaScript, SQL, Rust, Go, Kotlin

Frameworks/Technologies: React, Node.js, Express, React Native, Prisma ORM, Docker, Redis

Systems/Tools: Linux, GDB, Git, Terraform, AWS, GitHub Actions, PostgreSQL, MongoDB

Concepts: Multithreading (POSIX), Concurrency, TCP/IP Networking, Unit Testing, RESTful APIs

ACTIVITIES & LEADERSHIP

Civil Air Patrol

Hillsboro, OR

Cadet Technical Sergeant

2016 – 2020

- Participated in the Air Force's annual National CyberSecurity competition
- Volunteered for community site security and completed orientation flight lessons

Computer Action Team

Portland, OR

Front Desk Volunteer

2023 – 2024

- Responded to tickets and proxy tickets
- Assisted other students and faculty in software issues and administrative tasks
